Description

The RHP143 models are part of our successful RHP Series split system heat pump lineup. These outdoor units are optimized for 14.3 SEER2/8.2 HSPF2 Minimum Efficiency in all US Regions.

Certification

The units are tested in accordance with the following:

Features

- **Easier installation** - Independent panels provide quick access for unit setup. Installation time is reduced by easy power and control wiring access. All models use TXVs. The filter-drier is shipped loose for installation in the field. The unit is factory-charged for 15 ft refrigeration piping. The small base dimension and reduced unit clearances make for easier retrofits.
- **Accessible information** - QR code on unit provides quick access to technical documents and warranty information.
- **Durable finish** - The coated steel wire fan guard, coated external fasteners, and pre-treated G90-equivalent galvanized steel chassis components resist corrosion and rust creep. Powdercoat paint further protects external panels.
- **Rugged coil protection** - Coils are protected from mechanical damage by a an extruded louver coil guard.
- **Quality coils** - Enhanced aluminum fins are mechanically bonded to copper tubing.
- **Protected compressor** - Compressors are protected internally by a high pressure relief valve and a temperature sensor, and externally by the system high and low pressure switches.
- **Reliable operation** - Ball bearing fan motors provide superior performance in extreme temperatures.
- **Environmentally friendly** - CFC-free R-410A refrigerant delivers environmentally friendly performance with zero ozone depletion.
- **Top discharge** - Warm air is blown up, away from the structure and any landscaping and allows compact location on multi-unit applications.
- **Low operating sound levels** - Developed using CFD and FEA tools, the sturdy cabinet and top design provides sound performance as low as 66 dBA. Compatible accessories for further sound reduction are also available.
- **Better service access** - Diagonal base valves with open access for low-loss fittings, single panel access to the electrical controls, full corner access, and removable fan guard allow easy access for unit maintenance.
- **Agency listed** - Safety certified by CSA to the 4th Edition of UL 1995/CSA 22.2. Performance certified to ANSI/AHRI Standard 210/240 in accordance with the Unitary Small Equipment certification program.

Physical and electrical data

Table 1: Physical and electrical data

Outdoor unit model	RHP14318B21 S	RHP14324B21 S	RHP14330B21 S	RHP14336B21 S	RHP14342B21 S	RHP14348B21 S	RHP14360B21 S
Unit supply voltage	208/230 V, 1 phase, 60 Hz						
Normal voltage range ¹	187—252						
Minimum circuit ampacity	9.1	13.4	15.6	20.3	26.1	26.1	30.3

Charge (oz/ft)	0.62	0.62	0.62	0.62	0.67	0.67	0.67
Operating weight (lb)	134	140	153	183	213	215	242

Physical and electrical data notes

1. Rated in accordance with AHRI Standard 110-2012, utilization range A.
2. Dual element fuses or HACR circuit breaker. Maximum allowable overcurrent protection.
3. Dual element fuses or HACR circuit breaker. Minimum recommended overcurrent protection.
4. Refer to the *Hard Start Kit Accessory Installation Manual* for the hard start kit part number for each model. The hard start kit is a field-installed accessory.
5. For applications with non-standard vapor line sizes, see the *Applications and accessories* section.
6. The unit charge is correct for the outdoor unit, smallest matched indoor unit, and 15 ft of refrigerant tubing. For tubing lengths other than 15 ft, add or subtract the amount of refrigerant, using the difference in actual refrigerant piping length (not the equivalent length) multiplied by the per foot value.

Dimensions

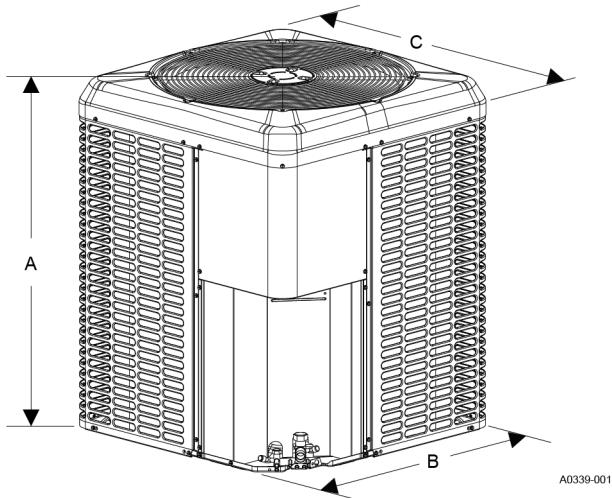

Table 2: Dimensions

Unit model	Dimensions (in.)			Refrigerant connection service valve size (in.)	
	A	B	C	Liquid	Valve
RHP14318B21S	33 1/4	24	24	3/8	3/4
RHP14324B21S	36 1/4	24	24		
RHP14330B21S	30	29 1/4	29 1/4		
RHP14336B21S	33 1/4	35 1/4	31 3/4		
RHP14342B21S	39 1/2	35 1/4	31 3/4		
RHP14348B21S	39 1/2	35 1/4	31 3/4		
RHP14360B21S	46	38	34 1/4		

① Note:

- All dimensions are in inches and are subject to change without notice.
- Overall height is from the bottom of the base pan to the top of the fan guard.
- Overall length and width include screw heads.

System charge table notes

1. A minus number indicates that you remove that charge.
2. For applications that require a TXV, use S1-1TVM*** series kit.
3. Use a TXV kit with these indoor units to obtain system performance.

4. Systems matched with furnaces or air handlers not equipped with blower-off delays may require blower time delay.
5. Do not use XAF or XAU coils in horizontal applications.
6. Charge adders shown above do not indicate that coils are rated for every application. See the performance data tables for actual performance for specified system matches. Obtain certified system ratings from <http://www.ahridirectory.org>.

Charging

1. Check the factory unit charge listed on the unit nameplate to verify the refrigerant charge for the outdoor unit, the smallest matched indoor unit, and the 15 ft of interconnecting refrigeration piping.
2. Verify the indoor metering device and additional charge required for the specific matched indoor unit in the system using Table .
3. Add additional charge for the amount of interconnecting refrigeration piping greater than 15 ft at the rate specified in Table .
4. For installations requiring additional charge, weigh in refrigerant for the specific matching indoor unit and actual refrigeration piping length.
5. After weighing in the charge adders for the matched indoor unit and refrigeration piping, verify the system operation against the temperatures and pressures in the charging chart for the outdoor unit. Locate the charging charts on the outdoor unit and in the *Service Data Application Guide* on www.simplygettingthejobdone.com. Follow the subcool or superheat charging procedure in the *Installation Manual* according to the type of indoor metering device in the system, and allow 10 min after each charge adjustment for the system operation to stabilize. Record the charge adjustment made to match the charging chart.
6. Permanently stamp the unit nameplate with the total system charge defined as follows: total system charge = base charge (as shipped) + charge adder for matched indoor unit + charge adder for actual refrigeration piping length + charge adjustments to match the charging chart.

Air handler capacity data notes

- Rated in accordance with DOE test procedures (Federal Register 12-27-79 and 3-18-88) and ANSI/AHRI Standard 210/240.
- The cooling MBH is based on 80°F entering air temperature, 50% relative humidity (RH), and rated airflow.
- The energy efficiency ratio (EER2) is the total cooling output in BTUs at 95°F outdoor ambient divided by the total electric power in watt-hours at those conditions.
- The heating MBH is based on AHRI standards of 70°F DB (Dry Bulb) entering indoor air, 72% RH (Relative Humidity) outdoor air with 25 ft of interconnecting piping and no supplemental electric heat operation. HSPF2 (Heating Seasonal Performance Factor) is the total heating output during a normal annual usage period for heating divided by the total electric power input during the same period. COP (Coefficient of Performance) equals Heating MBH output divided by (total kW input x 3.412).
- A cell with no value means not applicable.

Furnace capacity 1.5 ton

Furnace capacity data notes

- For rated condition information, see [Air handler capacity data notes](#).
- High-efficiency motor furnaces have blower off delay (BOD) standard.

Applications and accessories

Refer to the *Price Manual* for specific model numbers.

Standard application limits*		
Maximum refrigeration piping equivalent length		80 ft
Outdoor ambient temperature limits		
Cooling operation	Maximum DB	125°F
	Minimum DB	55°F
Heating operation	Maximum DB	75°F
	Minimum DB	0°F

- ⓘ **Note:** *For applications such as low ambient, reduced refrigeration piping, or long refrigeration piping, see the accessories listed in the following section.

Standard Low Ambient Control Kit S1-2LA06700424: Allows the use of air conditioning at low outdoor ambient temperatures down to 20°F (-7°C). For use with all R-410A single stage AC and HP models.

Start Assist Kit S1-2SA067***:** Provides increased compressor starting torque for areas with low supply voltage. Required for units with recip compressors when applied with indoor TXV, and for all units when applied with long refrigeration piping or low ambient kits. May be factory installed on select AC and HP units (see Table). See *Price Pages* or *Source1 SmartSearch* for the correct kit for each application.

Compressor Crankcase Heater Kit (S1-025***):** A wraparound electrical resistance heater that warms the compressor sump, reducing the chance of liquid slugging on startup. Required on all long refrigeration piping and low ambient applications. See *Price Pages* or *Source1 SmartSearch* for the correct part for each application.

Indoor TXV Kit S1-1TVM*:** Thermal expansion valves precisely meter refrigerant for optimum performance over a wide range of conditions. See Table , *Price Pages*, or *Source1 Smart Search* for TXV part number for each AC and HP model.

Cold Weather Charging Tent S1-CHGTENT01: Provides warm environment to accurately service AC and HP systems in ambient conditions 55°F (13°C) or colder.

Touch-up Paint S1-5130153**:** Color-matched aerosol paint for touching up unit chassis and panels. See *Price Pages* or *Source1 SmartSearch* for the correct color for each application.

Compressor Sound Blanket S1-010-07xxx-000: A field-installed dense foam cover that provides 2dBA sound level reduction. See *Price Pages* or *Source1 SmartSearch* for the correct blanket for each application.

Thermostat: Compatible thermostat controls are available through accessory sourcing. For optimum performance, these outdoor units are fully compatible with our residential Hx™ Touch Screen Thermostat available through Source1. For more information, see the thermostat section of the *Product Equipment Catalog*.

Sound power ratings - cooling

i Note: Rated in accordance with AHRI Standard 270.

Mechanical specifications

Manufacture and certifications

- Units shall be manufactured in an ISO 9001 certified facility.
- Units shall be certified by CSA to 4th Edition of UL 1995 / CSA 22.2 and performance certified to ANSI/AHRI Standard 210/240.
- Units shall be sound tested according to ANSI/AHRI Standard 270.
- Certified matched system ratings will be available for download from the AHRI online directory at <http://www.ahridirectory.org>.

Unit application

- Units shall be approved for cooling operation between 55°F and 125°F without modification.
- Units shall be approved for heating operation between 0°F and 75°F without modification.
- Units shall be approved for refrigeration piping up to 80 ft equivalent length without modification.
- Units shall be approved for installation within 6 in. of a flat vertical wall without modification, according to the instructions in the technical literature.
- Units shall be certified to the 5th Edition (2014) of the Florida Building Code for both ground-mounted and rooftop-mounted applications up to 200 ft above grade with approved mounting kit.

Unit access

- Units shall have a removable fan guard that can be removed independently of the top for interior access through the top of the unit without damaging the coil.
- Units shall have two removable stamped steel coil guards for exterior coil access.
- Units shall have a separate compartment for electrical controls that can be accessed without disturbing the unit airflow.
- Units shall have a blockoff panel that can be removed to provide interior unit access through the side of the unit.
- Units shall have a removable blockoff panel and a swing open removable electrical panel that provides sufficient interior unit access for removing the compressor through the side of the unit.

Unit construction

- Units shall be shipped completely wired, piped and assembled. Wiring pigtails shall be provided for field control wiring connections. Service valves shall be provided for field refrigerant line connections.
- Units shall be factory leak checked, run tested, and shipped with a holding charge of R-410A refrigerant.
- Unit cabinet components shall be G90 equivalent steel finished with powder-coat paint rated at a minimum of 500 h under ASTM B117 testing.
- Unit base pan shall be stamped G90 equivalent steel finished with powder-coat paint rated at a minimum of 500 h under ASTM B117 testing.
- Units shall have a single corner post opposite the electrical control box and two independently removable steel coil guard panels to optimize cabinet strength and serviceability.

- Units shall have L-shaped stamped sheet metal coil guards with interior facing extrusions for superior panel stiffness and durability from hail and other mechanical impacts.
- Units shall come with a stainless steel liquid line filter-drier that is shipped loose for installation in the field.
- Unit base valves shall be mounted diagonally on the unit base pan with service ports that provide sufficient clearance for low-loss hose fittings.
- Units shall provide a service port mounted in the base pan such that panels can be removed without moving the service port.
- Units shall be constructed with a high pressure switch and a low pressure switch for system protection.
- Units shall be constructed with all badging and labels applied at the factory.

Unit components

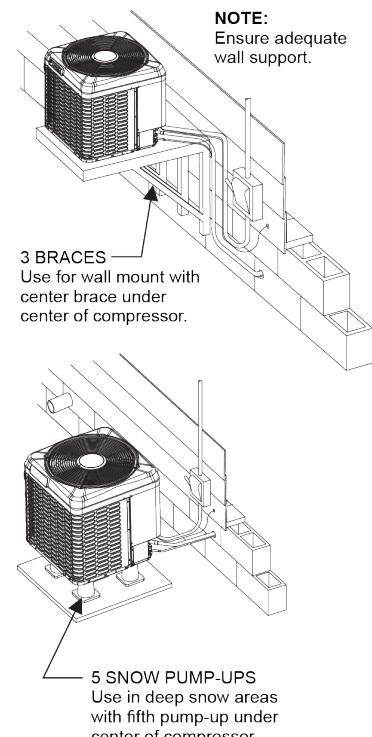

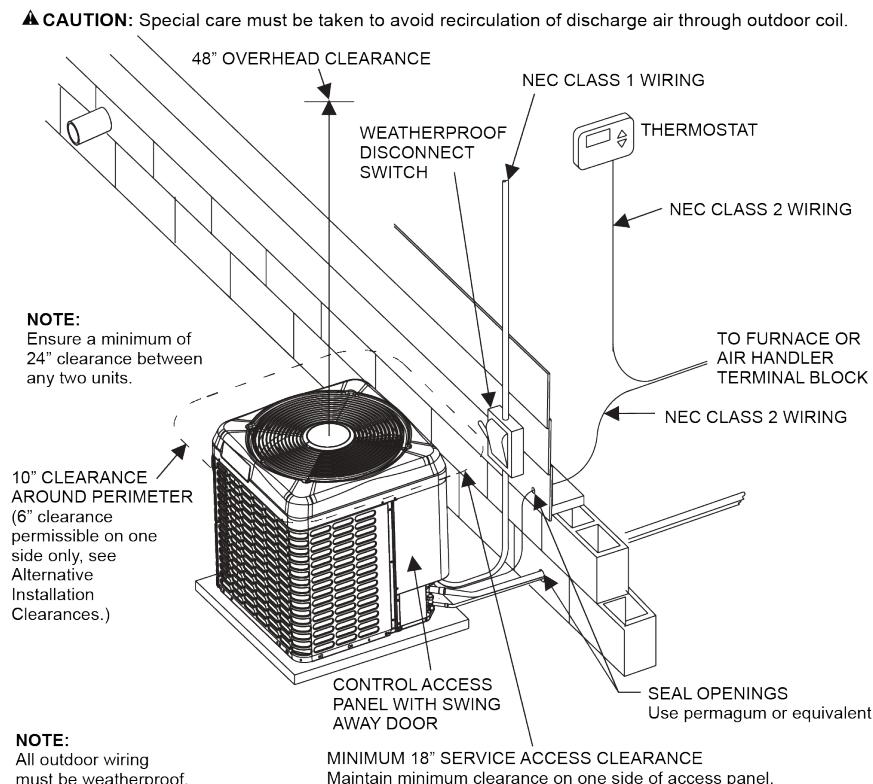

- Compressor shall be hermetic with internal electrical overload protection and internal overpressure protection.
- Compressor shall be mounted on neoprene vibration isolators that do not require the removal of transportation clips or brackets.
- Outdoor fan shall be direct drive with vertical air discharge for low sound levels.
- Outdoor fan motor shall be totally enclosed with permanently lubricated ball bearings motors approved for vertical shaft applications.
- Outdoor coil shall be air cooled and constructed of enhanced aluminum fins mechanically bonded to internally enhanced Ø 7mm copper tubing.

Unit warranties

- Unit manufacturer shall provide a limited 10-year compressor warranty without a requirement for unit registration.
- Unit manufacturer shall provide a limited 5-year parts warranty extended to 10 years with registration.

Typical installation

Figure 2: Typical installation

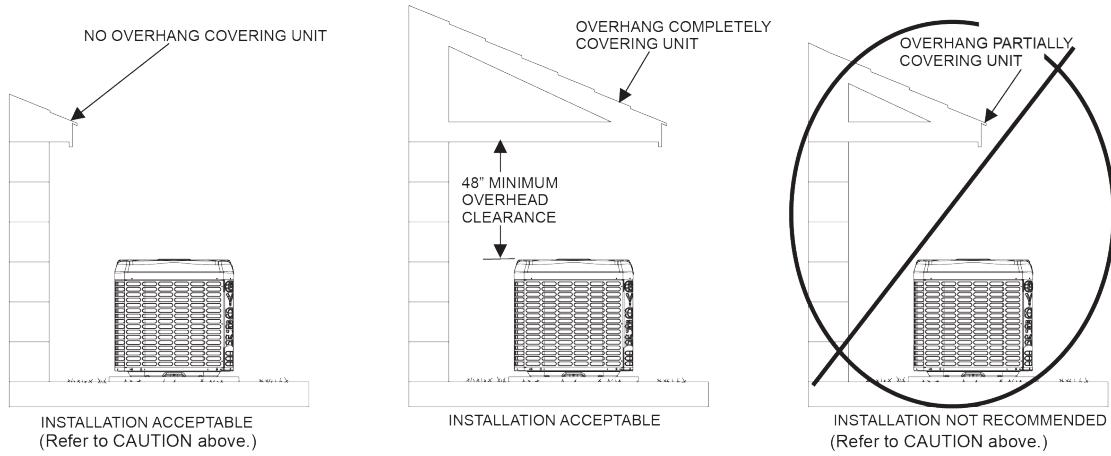

A0260-002

CAUTION

Care must be taken to prevent ice from damaging the unit. Damage may occur from ice falling onto unit from a sloped roof or from a vertical drip line due to a partial overhang.

Figure 3: Overhang positioning

NOTE:

The unit must be installed on a solid base above the grade. The base must not be able to settle or shift causing strain on refrigerant lines and possible leaks.

▲ CAUTION: Special care must be taken to avoid recirculation of discharge air through outdoor coil.

NOTE:

Install unit on flat surface. If installation surface is sloped, ensure that unit slopes away from house structure at 1/4" per foot.

Cooling multipliers for determining the performance with other indoor sections

For dry bulb temperatures different than those listed (between 73 °F - 87 °F), sensible capacity increases by 1060 Btuh per 1000 CFM per degree above the listed temperature and decreases by 1060 Btuh per 1000 CFM per degree below the listed temperature.

Condenser only data table notes

i Note:

1. For Outdoor Unit (Condenser) performance only. Data does not include the effects of air handler power or heat.
2. Performance based on 15°F subcooling and 15°F superheat at the Outdoor Unit base valves.
 - a. Increase capacity by 1% for each 2°F increase in subcooling.
 - b. Decrease capacity by 1% for each 2°F decrease in subcooling.
3. Maximum recommended condensing temperature is 140°F.

Condenser only data - 3 ton

Cooling multipliers for determining the performance with other indoor sections

For dry bulb temperatures different than those listed (between 73 °F - 87 °F), sensible capacity increases by 1060 Btuh per 1000 CFM per degree above the listed temperature and decreases by 1060 Btuh per 1000 CFM per degree below the listed temperature.

Condenser only data table notes

i Note:

1. For Outdoor Unit (Condenser) performance only. Data does not include the effects of air handler power or heat.
2. Performance based on 15°F subcooling and 15°F superheat at the Outdoor Unit base valves.
 - a. Increase capacity by 1% for each 2°F increase in subcooling.
 - b. Decrease capacity by 1% for each 2°F decrease in subcooling.
3. Maximum recommended condensing temperature is 140°F.

Condenser only data table notes

i Note:

1. For Outdoor Unit (Condenser) performance only. Data does not include the effects of air handler power or heat.
2. Performance based on 15°F subcooling and 15°F superheat at the Outdoor Unit base valves.
 - a. Increase capacity by 1% for each 2°F increase in subcooling.
 - b. Decrease capacity by 1% for each 2°F decrease in subcooling.
3. Maximum recommended condensing temperature is 140°F.

Cooling multipliers for determining the performance with other indoor sections

For dry bulb temperatures different than those listed (between 73 °F - 87 °F), sensible capacity increases by 1060 Btuh per 1000 CFM per degree above the listed temperature and decreases by 1060 Btuh per 1000 CFM per degree below the listed temperature.
